GENERATOR PREVENTATIVE MAINTENANCE SERVICE AGREEMENT

Help maintain the function of your Generator by regularly having a certified Generac Technician effectively check, test, and tune up your system. Equipment that has not been properly serviced tends to be less efficient and work significantly harder. A Preventative Maintenance Agreement is greatly recommended to maintain your stand-by generator. Its purpose may increase the longevity and efficiency of your equipment, help minimize breakdowns, improve the operations and avoid unplanned expenses. However, if repairs are needed, the PMA **priority customer** will receive a 10% discount towards parts and labor. At CGC Generators we will properly maintain your maintenance records for Warranty issues. This scheduled maintenance will be performed once in late spring, approximately May, just prior to hurricane season. And once again in late fall, approximately November.

Annual GPMSA Check Includes:

Mechanical Functions:

- Replace spark plugs as necessary
- Check Adjustment of all spark plugs
- Check engine oil and oil filter
- Conduct manual start test to insure proper operation
- Check battery and clean post as necessary
- Clean & replace air filter as needed
- Check muffler and exhaust system
- Check fan cooling system
- Check & clean cooling airflow screens
- Check entire unit for oil leaks
- Clean exterior casing

Electrical Functions:

- Check voltage for proper output
- Check current draw of Generator
- Check frequency output
- Check emergency panel wiring
- Check grounding system
- Check elect. connections, tighten as needed
